# User Stories

1) As a user, I want to try many clothes in one simulation and these products don't have to be from same brand.

2) As a user, I want to make a request to sellers to put the newest products to the application.

3) As a user, I want to share my look with my friends via application.

4) As a user, I want to see recommended cloth combinations.

5) As a user, I want to save my looks in my virtual closet and whenever one of the products' price changes, I want to be informed about it via notifications.

6) As a seller, I want to offer users discount via notifications and getting feedbacks from users while they are trying the clothes.

7) As a seller, I want to show how many users are trying the same product to users, so that they can communicate with and ask their looks to one another.

8) As a seller, I want to connect my database with the application. So whenever a new product added to the store, it will be added to the application automatically.

9) As a seller, I want to communicate with developer team to solve technical issues via a help button in the application screen.

10) As a seller, I want users to make a request to my store to get the right size if their sizes are out of range. Therefore we can fix our size ranges according to the feedbacks.
